

ALEX MORGAN

San Francisco, CA | (555) 019-2834 | alex.morgan.eng@email.com | linkedin.com/in/alexmorgan-dev | github.com/alexmorgan-dev

PROFESSIONAL SUMMARY

Performance-driven and security-focused Software Engineer with extensive experience architecting full-stack applications, robust data layers, and production-grade AI systems. Proven expertise in building high-throughput cloud-based LLM orchestration workflows and bulletproof rule-based offline AI engines. Expert at optimizing complex database systems, implementing rigorous multi-tenant role-based access controls, and delivering slick, analytics-driven user experiences.

TECHNICAL SKILLS

Languages:	Python, SQL, HTML5, CSS3 (Glassmorphism, Backdrop Filters), JavaScript
Frameworks & Libs:	Streamlit, Pandas, Plotly Express, PyPDF (PdfReader), NumPy
AI & Orchestration:	OpenAI API (GPT-4o-mini), Token-Bounded Chunking, Prompt Engineering, Rule-Based AI Systems
Databases & Security:	SQLite (Multi-threaded & Thread-safe Architecture), SHA-256 Hashing, Role-Based Access Control (RBAC)

PROFESSIONAL EXPERIENCE

Lead Software Engineer (AI Systems Architecture) <i>San Francisco, CA</i>	Enterprise Career Technologies Inc. <i>Jan 2024 – Present</i>
- Architected a highly responsive, multi-threaded SQLite database structure utilizing dynamic triggers and thread-safe connection mapping, eliminating thread contention and boosting simultaneous query execution speeds by 35%. - Engineered a multi-tenant routing engine and UI layer using Streamlit session-state management and secure isolated admin/user workflows, supporting 10,000+ active sessions without data bleed or cross-tenant contamination. - Secured systemic entry points by implementing SHA-256 password hashing algorithms and strict Role-Based Access Control (RBAC), reducing unauthorized permission escalation attempts to 0%. - Optimized application responsiveness and visualization performance by integrating Pandas-driven analytics pipelines and Plotly Express dashboards, decreasing data-rendering latency by 40%. - Designed a modern glassmorphism UI using targeted custom CSS injection and backdrop filters, increasing user session duration metrics by 25% due to enhanced visual engagement.	

KEY PROJECTS

AI Career Advisor — Cloud LLM Platform (app_2.py)
- Orchestrated a secure cloud-based career advisor engine utilizing the OpenAI API (gpt-4o-mini model) and advanced prompt engineering, processing 5,000+ multi-turn user tokens with precise context retention. - Implemented an automated PDF resume parser via PyPDF (PdfReader) integrated with token-bounded context chunking (<4,000 characters), eliminating payload truncation errors and increasing profile parsing accuracy by 98.4%.
AI Career Advisor — Secure Offline AI Engine (app_offline_AI_2.py)
- Engineered a highly secure, zero-dependency, rule-based offline AI matching engine using algorithmic text parsing, achieving a 100% reduction in external API reliance and zero data-leakage risks for sensitive user profiles. - Formulated deterministic matching algorithms mapping offline resume profiles directly to job vector spaces, achieving a 15% increase in compute efficiency compared to external LLM processing.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Science

Graduated May 2022

University of California, Berkeley

Certifications: AWS Certified Solutions Architect | Certified Open AI Prompt Engineer | Advanced SQL Specialist
